

Parameterization Option

Posted by radhiutm - 2009/04/16 09:34

Hi,
I tried to run parameterization option but this message turn out "the HOME directory is not set.Please go to AGWA preferences"
What happened and what should i do?

THANX

For must set the Home directory for each Map document you use with AGWA. The Home directory is how AGWA locates files it uses during the parameterization process. In the AGWA2 Tools menu, go to Other Options and click Preferences. This opens the AGWA2 Preferences form where you can set the Home directory and Temp directory. The Home directory must be set to the directory that sits above the Datafiles directory. In most cases, this will just be C:AGWA2 because most people will download the AGWA 2.0 package and extract it there.

The Temp directory in the AGWA2 Preferences form is the location that temporary data products created during the delineation, discretization, and parameterization steps are stored.

Let me know if you have further questions.

Hi, thanx for the solution.it works!!

Another questions:

1.When i click parameterization option->element parameter, this message appear
"formparameterizationelements.new()ErrorHRESULT E_FAIL has been returned from a call to a COM component" then, i click OK, it dissappear and Element parameterizer window appear.i filled up the necessary parameter, but when i click Process, another message appear
"formparameterizerelements._parameterizerelements_statusincrements()Object reference not set to an instance of object"
Solution?

2. can u give me a link to tutorial step using san pedro data?i browsed in this website but could'nt find it.FYI now i'm using san pedro data but referring to agwa2 manual. It a little bit confuse.

Thanx.

The first problem you're having is explained in this post. The Home directory you set does not contain the Datafiles directory, or if it does it doesn't contain the necessary files and folders.

Tutorial 1 does a better job explaining the Datafiles directory than the manual does. You can find the tutorials in the

Downloads ->AGWA 2.x ->Tutorials

The San Pedro tutorial is Tutorial 1.
